

# HIGH PRESSURE - DIN 2353 connectors

## Characteristics and applications

Threaded (pipe) fittings with 24° cone sealing and cutting ring are widely used in many branches of industry to connect steel pipes with outside diameter from 4 to 42 mm. Fittings according to DIN 2353 can also be used to connect flexible hose assemblies (as a body without nut and cutting ring). Manufactured according to ISO 8437-1 or DIN 2353. Used in hydraulic and pneumatic drive and control systems as well as general industrial applications.

### Operation principle of fittings with a cutting ring

A complete connection of a pipe with a hydraulic installation requires: a fitting (1), a cutting ring (2), a nut (3) and a hydraulic precision pipe (4). During assembly, sharp edges of the ring (5 and 6) bite into the pipe according to the 24° cone (7) and creating a "shoulder" (9). The pipe, cut straight at 90° angle, must be pushed firmly against the bottom of the seat (10). Otherwise, the cutting ring does not bite into the pipe deep enough to create a tight connection

The fittings manufactured according to DIN 2353, depending on their usage and pressure, can be divided into the following categories:

- LL (extra light series) - used in small hydraulic and cooling devices, for plastic hoses, compressed air, propane, etc.
- L (light series) - used for standard applications within the working pressure of that range.
- S (heavy series) - used for higher pressure, hydraulic high pressure applications such as: hammering, shipbuilding, mining, chemical industry, heavy equipment.

To identify DIN2353 fitting, a seat "D" (that defines pipe outside diameter), and thread size "M" (metric thread is a standard) must be measured. The table below presents all information needed for quick and easy identification of the range and module number used in a code number at TUBES INTERNATIONAL®. For example: fitting with D = 10 mm and thread size M16x1.5 corresponds to a light range and 10L module.

picture	pipe D [mm]	thread size M [mm]	series	module
	4	M8x1	LL (extra light)	4LL
	6	M10x1		6LL
	8	M12x1		8LL
	6	M12x1.5		6L
	8	M14x1.5		8L
	10	M16x1.5		10L
	12	M18x1.5		12L
	15	M22x1.5		15L
	18	M26x1.5		18L
	22	M30x2		22L
	28	M36x2	L (light)	28L
	35	M45x2		35L
	42	M52x2		42L
	6	M14x1.5		6S
	8	M16x1.5		8S
	10	M18x1.5		10S
	12	M20x1.5		12S
	14	M22x1.5		14S
	16	M24x1.5		16S
	20	M30x2		20S
	25	M36x2	S (heavy)	25S
	30	M42x2		30S
	38	M52x2		38S

# HIGH PRESSURE - DIN 2353 connectors

## Basic information

### Material

DIN 2353 pipe fittings are supplied in two material versions:

- carbon steel (zinc-plated or phosphate-coated) standard seal: NBR rubber,
- stainless steel (AISI 316) standard seal: Viton.

### Working temperature

Allowable working temp. depends on the material of a connector and seal:

- |                            |                         |
|----------------------------|-------------------------|
| - carbon steel:            | from -40°C up to +120°C |
| - carbon steel + NBR:      | from -35°C up to +100°C |
| - stainless steel:         | from -60°C up to +400°C |
| - stainless steel + Viton: | from -20°C up to +200°C |

### Working Pressure

The max. working pressure (nominal pressure) of DIN 2353 pipe fittings differs according to the type (light series, heavy series), size (pipe outside diameter), material and manufacturer. In the table below, data from different producers showing different types of fittings, made of carbon and stainless steel, is collected. It facilitates preliminary selection. If the required working pressure exceeds the value in the table, please contact TUBES INTERNATIONAL® Technical Department.

series	pipe O.D. [mm]	maximum working pressure [bar]		
		for connection with cutting ring according to PN-ISO 8434-1	for complete fitting according to different producers	
			minimum	maximum
LL	4 ÷ 8	100		
L	6 ÷ 15	250	160	400
	18 ÷ 22	160	100	315
	28 ÷ 42	100	100	250
S	6 ÷ 12 (14)	630	400	630
	16 ÷ 25	400	250	400
	30 ÷ 38	250	250	315

Nominal pressure (max working pressure) given by manufacturers is calculated within static working conditions, the safety factor of 4 for the cutting ring connection. For fittings with metal to metal seal and BANJO fittings, the safety factor varies from 1.5 to 2.5. When choosing a fitting, dynamic pressure load and vibrations in the installation should be also considered.

For temperatures above +100°C, the max. working pressure may require reduction (contact TUBES INTERNATIONAL® Technical Department).

### Medium

Pipe fittings according to DIN 2353 can be used to transfer a wide range of fluids and gases. However, the compatibility of the medium with fitting material and seal type must be always checked. For all applications different from standard hydraulic oils, please contact TUBES INTERNATIONAL® Technical Department.

### Pipes used in installations

Pipes used for the construction of installations,

- seamless steel precision pipes, protected against corrosion (phosphate-coated, zinc-plated), annealed,
- stainless steel precision pipes, cold-drawn, free of annealing scale, heat treated (annealed).

Pipe dimensions (outside diameter, wall thickness) should be chosen according to the required flow rate and working pressure in an installation.

# HIGH PRESSURE - DIN 2353 connectors

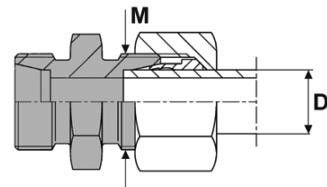

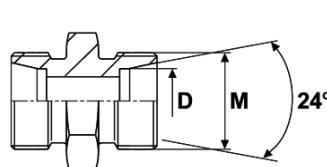

## Identification of DIN 2353 pipe fitting

Fittings according to DIN 2353 have up to 4 different connection ends joining them with the remaining part of the installation. The two most common are:

- connectors with 24° cone or a connection end designed for the connection with 24° cone,
- connectors with one end designed to be screwed into the body (of a particular equipment or machine).

### Connectors with 24° cone

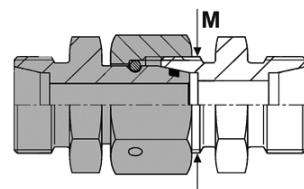

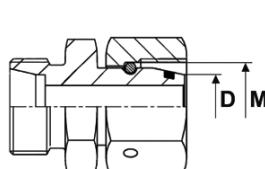

1) Designed to be connected with a pipe with D outside diameter. The parts connect when a cutting ring with D inside diameter is pressed down by a tightening nut with M female thread (code HD-M...).

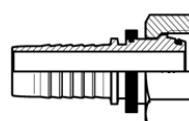

This connection end corresponds exactly to the end fitting of flexible hydraulic hoses such as (code: TI-ZMZ111... - light series and TI-ZMZ112... - heavy series).

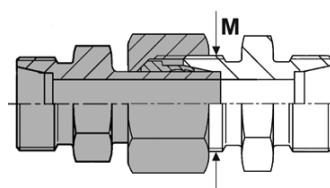

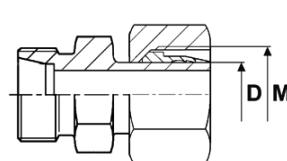

2) Fitting end mating the cone with swivel nut on a conical thread with an additional O-ring.

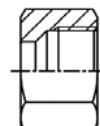

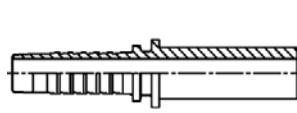

This connection end corresponds exactly to the end fitting of flexible hydraulic hoses type (code: TI-ZMZ111... - light series and TI-ZMZ112... - heavy series).

3) Fitting end mating the cone with swivel nut on a pipe end with a cutting ring and a nut.

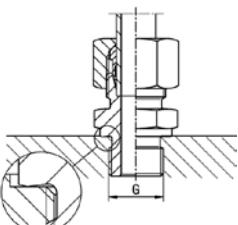

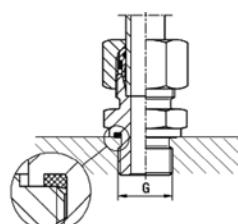

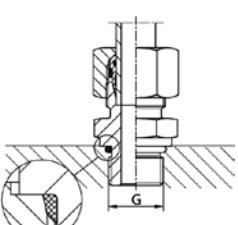

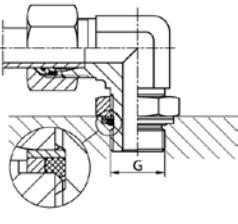

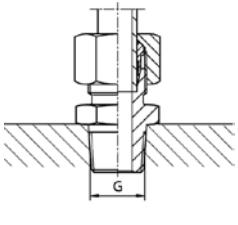

This connection end corresponds exactly to the end fitting of flexible hydraulic hoses such as (code: TI-ZMZ111... - light series and TI-ZMZ112... - heavy series), additionally with a cutting ring.

# HIGH PRESSURE - DIN 2353 connectors

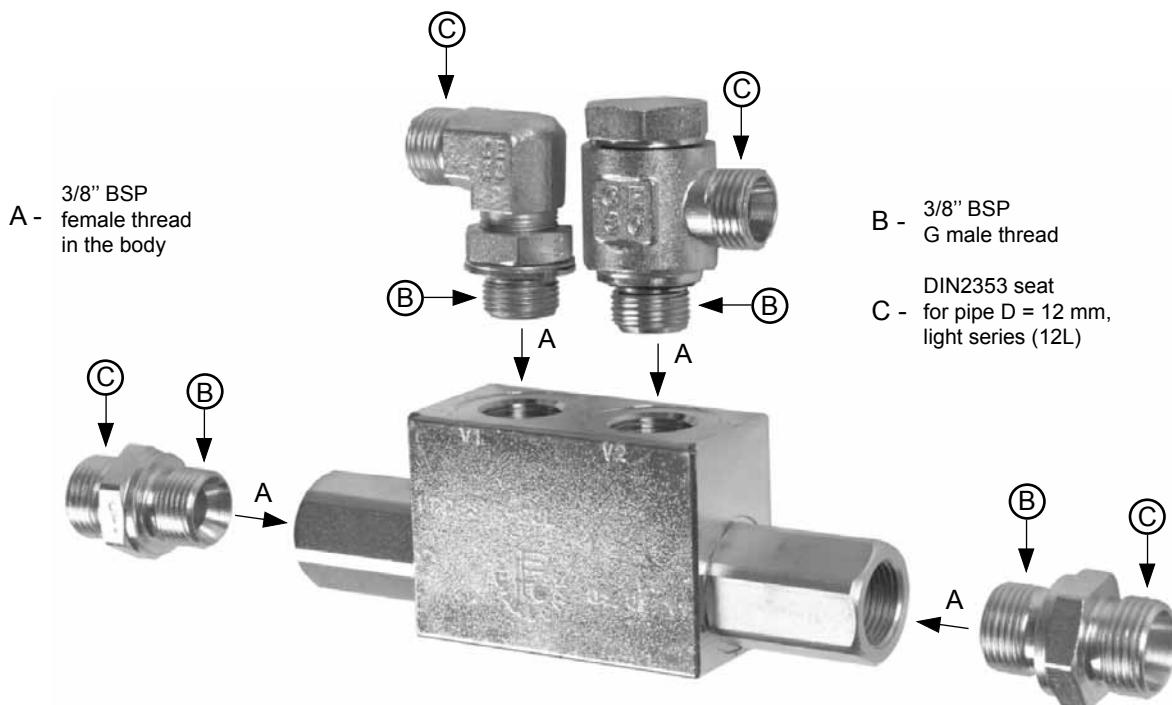

## Connectors - with male thread, designed to be screwed into the body

A connection end designed to be screwed into the body (of a particular equipment or machine) is identified by the size of a G male thread as well as sealing type.

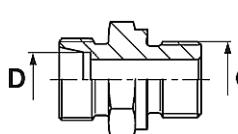

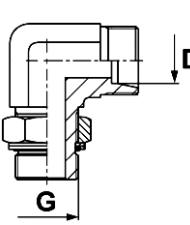

picture	seal type	G-type threaded screw	safety factor
DIN3852 B type 	metal to metal seal	- BSP parallel thread - metric parallel thread	2.5 : 1
DIN3852 E type 	elastomeric seal (rectangular shape)	- BSP parallel thread - metric parallel thread	4 : 1
ISO 11926 	O-ring seal	- UNF-UN	4 : 1
ISO 1179 G type ISO 6149 G type 	O-ring seal with retaining ring	- BSP parallel thread - metric parallel thread	4 : 1
DIN 3852 ANSI / ASME 	thread seal PTFE tape or anaerobic sealant	- BSPT - metric cone thread - NPT	2.5 : 1

# HIGH PRESSURE - DIN 2353 connectors

Connectors - with male thread - designed to be screwed into the body

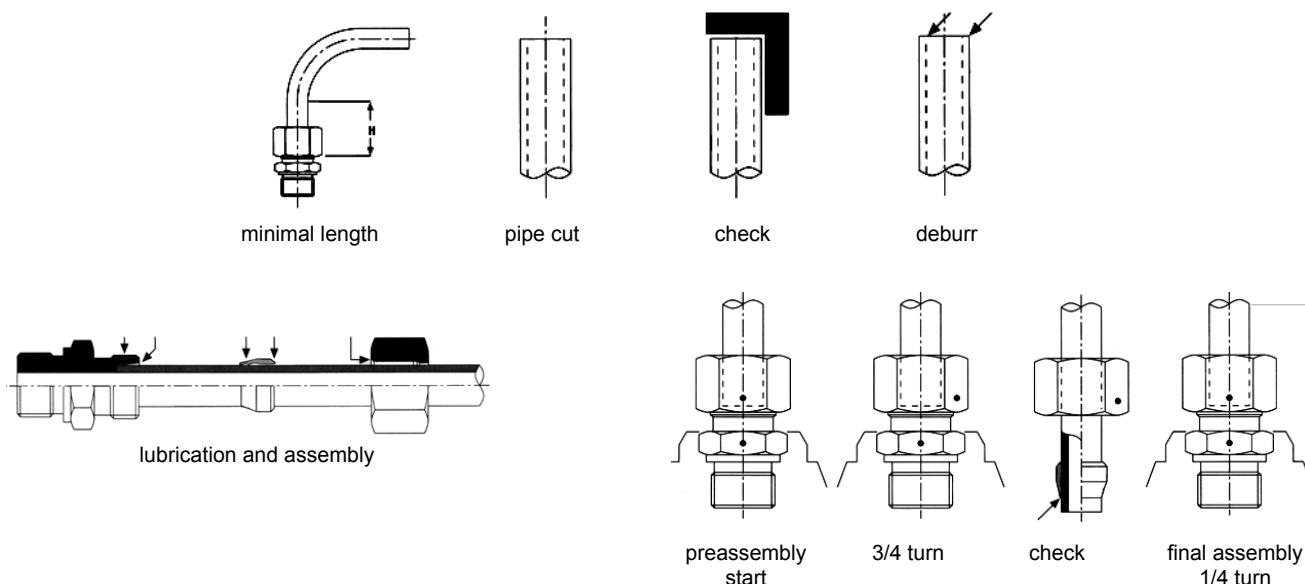

An example of DIN 2353 connectors used with a valve with imperial female thread is presented above. The table below shows the range of G male thread pipe sizes in their most common combination with DIN 2353 connectors (pipe size and series).

picture	module	pipe O. D. [mm]	series type	G thread male pipe sizes		
				BSP and NPT threads (parallel and taper)	metric threads (parallel and taper)	UN-UNF threads
	6L	6	L (light)	1/8	M10x1	7/16-20
	8L	8		1/4	M12x1.5	1/2-20
	10L	10		1/4	M14x1.5	1/2-20
	12L	12		3/8	M16x1.5	9/16-20
	15L	15		1/2	M18x1.5	3/4-16
	18L	18		1/2	M22x1.5	3/4-16
	22L	22		3/4	M26x1.5	1.1/16-12
	28L	28		1	M33x2	1.5/16-12
	35L	35		1.1/4	M42x2	1.5/8-12
	42L	42		1.1/2	M48x2	1.7/8-12
	6S	6	S (heavy)	1/4	M12x1.5	1/2-20
	8S	8		1/4	M14x1.5	1/2-20
	10S	10		3/8	M16x1.5	9/16-20
	12S	12		3/8	M18x1.5	9/16-20
	14S	14		1/2	M20x1.5	3/4-16
	16S	16		1/2	M22x1.5	3/4-16
	20S	20		3/4	M27x2	1.1/16-12
	25S	25		1	M33x2	1.5/16-12
	30S	30		1.1/4	M42x2	1.5/8-12
	38S	38		1.1/2	M48x2	1.7/8-12

# HIGH PRESSURE - DIN 2353 connectors

## DIN 2353 fittings assembly manual

1. Before start, check whether all tools are free from damage.
2. The length of a pipe should be at least twice as long as tightening nut (H length). The roundness of the pipe should meet DIN 2391 standard.
3. Pipe should be cut at 90° angle using a metal cutting saw (roll pipe cutters must not be used). Check the cut angle and deburr internally and externally.
4. Lubricate the inside of the 24° cone seat, thread, tightening nut and cutting ring.
5. Assemble the nut and cutting ring on the pipe as indicated in the picture. Ensure that the head of the cutting ring (thicker end) faces the tightening nut.
6. Push the pipe against the shoulder of the 24° cone of the body. Screw the nut manually until it is finger tight and then tighten the nut with a spanner until the cutting edge of the cutting ring starts to bite into the pipe. The pipe must not rotate during this part of assembly!
7. Push the pipe firmly against the bottom of the cone seat, tighten the nut with a spanner by about 3/4 turn. The nut and the body can be marked to assure the 3/4 turn. While tightening, the cutting ring bites into the pipe creating a "collar" just in front of the ring. Tightening too strong or too weak, weakens the connection and may cause leakage or loosening of the pipe.
8. Loosen the nut, take out the pipe and check whether the collar in front of the cutting ring edge is visible. The collar has to be visible on at least 80% of the pipe circumference. Check if the cutting ring is firmly tightened on the pipe and cannot move alongside. If the grip is not tight enough, the preassembly must be repeated.
9. If the preassembly was correct, push the pipe against the bottom, tighten again about 1/4 turn beyond the point of clearly perceptible resistance. While tightening the body must be held firm by a spanner or a vice.
10. Preassembly of stainless steel fittings should be performed using special tools.

## Assembly machines for DIN 2353 rings

Pre-assembling of DIN2353 cutting rings on hydraulic pipes can be performed on special machines made for that purpose (see chapter MACHINES AND ACCESSORIES - hose assembly production).

# HIGH PRESSURE - DIN 2353 connectors

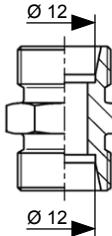

## Codes of connectors in the catalogue

Connectors are marked with special codes in our catalogue - they should be used when placing an order.

### Code example:

#### HD - G - 12L - SS

DIN 2353 connectors group

type of fitting: straight connector

pipe outside diameter: 12 mm

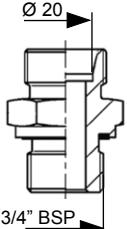

light series

#### material:

- |                            |      |
|----------------------------|------|
| carbon steel zinc-plated   | - no |
| carbon steel zinc-nickel   | - CN |
| carbon steel guardian seal | - W  |
| stainless steel AISI 316   | - SS |

#### HD - GE - 20S - BE - 12 - SS

DIN 2353 connectors group

type of fitting: straight connector

pipe outside diameter: 20 mm

heavy series

type of nipple thread: BSP thread

type of seal: elastomeric according to DIN 3852 E type

thread size BSP: 3/4" (12/16)

#### material:

- |                            |      |
|----------------------------|------|
| carbon steel zinc-plated   | - no |
| carbon steel zinc-nickel   | - CN |
| carbon steel guardian seal | - W  |
| stainless steel AISI 316   | - SS |

# HIGH PRESSURE - DIN 2353 connectors

## Metric pipe connection system - Eaton Walterscheid™

DIN2353 Eaton Walterscheid™ connectors are designed for the most challenging applications of pipes connected and sealed on a 24°cone. Eaton Walterscheid™ system ensures tightness of the connection up to 800 bar (for heavy series) and 500 bar (for light series).

DIN2353 Eaton Walterscheid™ connectors made of carbon steel are plated with nickel-free, Guardian Seal™ cover to provide exceptional resistance to corrosion.

The corrosion resistance of Guardian Seal™ cover exceeds the German VDMA24576 K5 standard (min. 720 hours in a salt spray chamber until red corrosion appears), qualifying the connectors for operation in the most demanding and stringent conditions. Guardian Seal™ is relatively more environment friendly. The cover is free of nickel and solvents. It meets global requirements of such European directives as RoHS (Restriction of Hazardous Substances), ELV (End-of-Life Vehicle) and REACH (Regulation for Registration, Evaluation, Authorization and Restriction for Chemicals).

DIN2353 Eaton Walterscheid™ connector covered with corrosion resistant Guardian Seal™ is a popular solution in marine and offshore industry, for heavy duty application in agriculture, mining, railway and construction.

**New Guardian Seal™ plating technology succeeds  
wherever standard protection fails!!!**

## HIGH PRESSURE - DIN 2353 connectors

Three options of Eaton Walterscheid™ system are available depending on the conditions of operation:

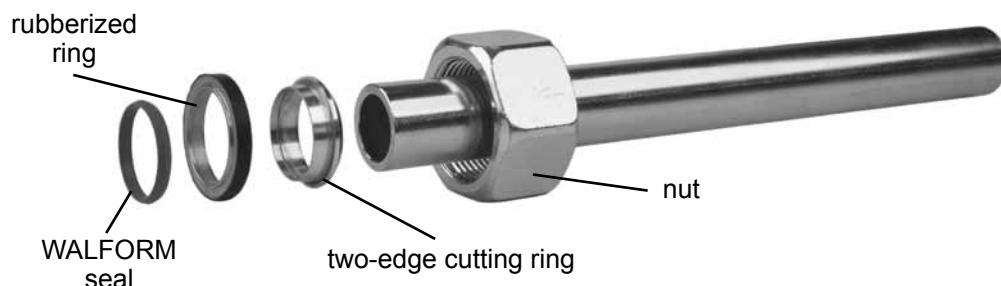

### WalPro - static operation

A nut with a cutting ring. The profiled construction of the ring ensures optimal cut penetration and a clamp evenly distributed all around the pipe diameter. Sealing is achieved when the ring is pressed against 24° cone in a nut body during tightening. Available in stainless steel also. A complete system with a cutting ring and a nut is available only as a set marked with a code HDW-MWP...

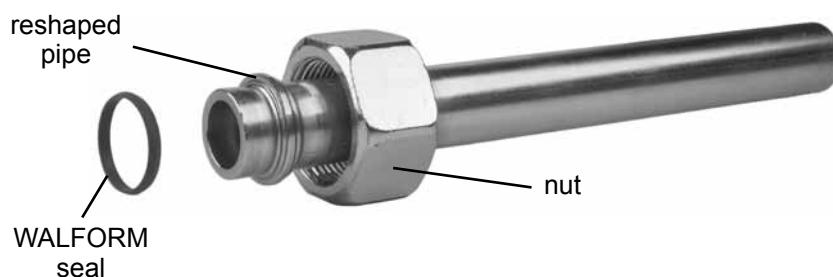

### WalRing - installation prone to vibration

A nut with a two-edge cutting ring integrated with a hardened, rubberized support ring with a special, elastomer (Viton) WALFORMplus seal. The support ring guarantees that the cutting ring properly penetrates a pipe. Reliable sealing is obtained when an elastomer seal is pressed between the pipe and the ring against 24° cone in a nut body during tightening. A complete WalRing system with rings, a seal and a nut is available only as a set marked with a code HDW-MWR...

### WALFORMplus - guarantees tightness even in highly dynamic operation conditions, pressure pulsation and mechanical loads

A nut with an elastomer (Viton) seal. For the system to work, the end of the pipe must be reshaped in a special machine intended for this purpose (available at TUBES INTERNATIONAL®). A shoulder formed on the pipe with the machine and the elastomer seal do not require any additional elements such as rings to make tight connection. Reliable sealing is obtained when an elastomer seal is pressed between the shoulder on the pipe and 24° cone in a nut body during tightening. The elements of WALFORMplus system (a seal and a nut) are available only as a set marked with a code HDW-MWF...

# HIGH PRESSURE - JIC 37° connectors

## SAE fittings - J514 (JIC 37°)

Fittings manufactured according to SAE J514 (ISO 8434-2) standard are widely used in many branches of industry to connect steel pipes with outside diameter from 6 to 38 mm. Fittings according to SAE J514 can also be used to connect flexible hose assemblies. Widely used in hydraulic and pneumatic drive and control systems as well as in industrial applications.

### Operation principle of JIC 37°

The pipes that are to be connected with JIC 37° fittings, must be flared with a flaring machine (hand tools must not be used). The connection of a fitting with a flared steel pipe with 74° angle cone ( $37^\circ \times 2 = 74^\circ$ ) is obtained by a ferrule in a tightening nut. The flared 37° part of the pipe couples with the conical 37° part of the fitting body assuring metal to metal seal. Fittings with elastomeric sealing (O-ring) are available as well. The fittings according to JIC 37° may also be connected with JIC type fittings (e.g. TI-ZJW110, TI-ZJZ110) of flexible hydraulic hose assemblies.

### Technical characteristics

#### Material:

Zinc-plated carbon steel, stainless steel (AISI 316Ti).

#### Working pressure:

Depends on the size and type of a fitting. The working pressure of the fitting given in the table is its max. working pressure (including temporary pressure build-up). Safety factor 4:1 (calculated for static pressure), for a connection of the fitting with a pipe or for fittings with elastomeric sealing. For fittings with taper thread or with metal to metal seal, the safety factor is 2.5:1.

#### Working temperature:

- for carbon steel fittings: from -20 C to +120 C
- for stainless steel fittings: from -60 C to +200 C

For temperatures above +100 C, the max. working pressure may require reduction.

#### Sealing:

NBR seals are used for carbon steel fittings, Viton (FPM) seals for stainless steel fittings as a standard. Working temperature range of the seals:

- NBR from -35°C up to +100°C,
- Viton (FPM) from -25°C up to +200°C.

#### Fluid being transferred:

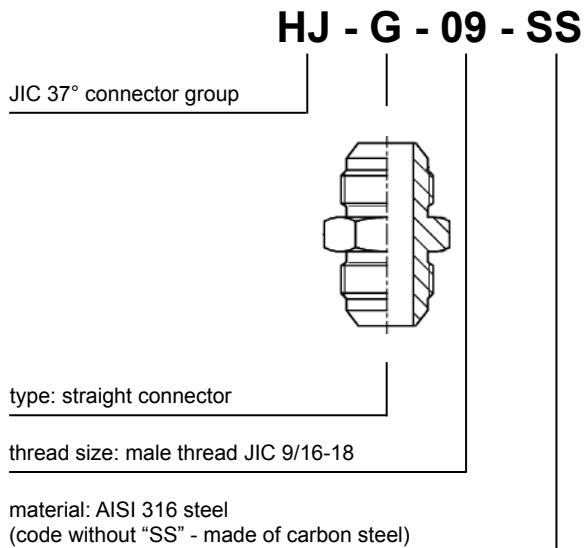

Fittings according to JIC 37° can be used to transfer a wide range of fluids and gases. However, the compatibility of the medium with fitting material and seal type must be always checked. For all applications different from standard hydraulic oils, please contact TUBES INTERNATIONAL® Technical Department.

# HIGH PRESSURE - JIC 37° connectors

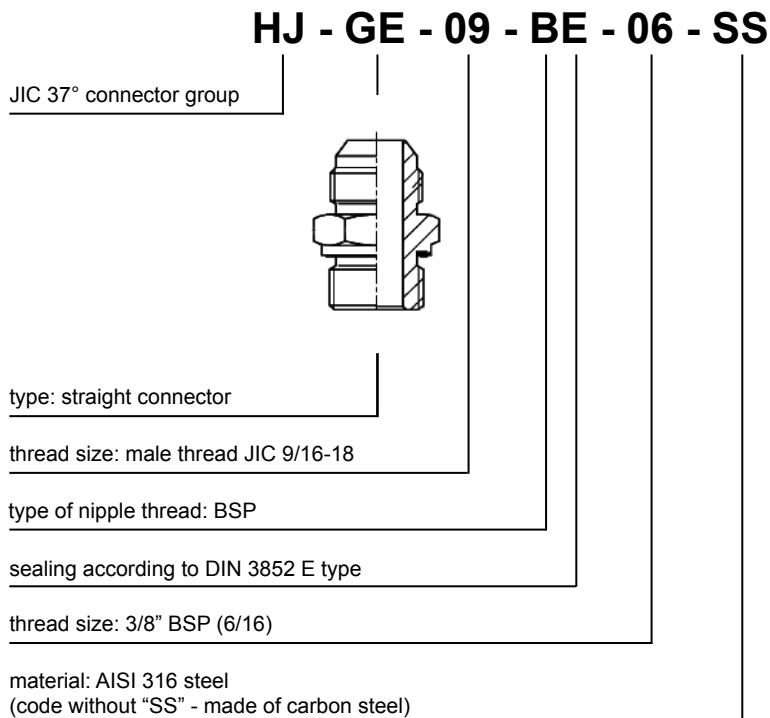

## Codes of connectors in the catalogue

Connectors are marked with special codes in our catalogue - they should be used when placing an order.

### Code example:

### Code example:

# HIGH PRESSURE - ORFS connectors

## SAE fittings - J1453 (ORFS)

ORFS (O-Ring Face Seal) connectors are used to connect rigid pipes in hydraulic applications. Pipe ends are flared at 90° C angle. The sealing is achieved by pressing an O-ring placed in the groove of the surface front flat-face of the fitting with a male thread. The ORFS fittings can also be connected with fittings of flexible hydraulic hose assemblies (e.g. TI-ZOW110, ZOZ110).

Material: zinc-plated carbon steel or AISI 316 steel. Add SS to the code of AISI 316 connector.
