

**CAMLOCK connectors -  
SAFETY BUMP accessories**

The SAFETY BUMP connector cap system is an alternative solution to the traditional CAMLOCK connector caps. The specially designed handle makes it easier to handle the hose, e.g. pulling the hose out of the tank container. They are made of glass fibre reinforced composite material. They are used in the chemical and petrochemical industries in an antistatic version (black) and in the food industry (white) made in accordance with FDA and CFR 177.1520.

**SAFETY LOCK**

The purpose of the SAFETY LOCK system is to prevent uncontrolled uncoupling of CAMLOCK connectors during cable handling as well as during unloading operations due to pulsation of the medium. By using the SAFETY LOCK safety system, operational safety is increased and potential losses are kept to a minimum. It is characterised by its great ease of assembly and disassembly. It is the ideal complement to the SAFETY BUMP system.
