High-temperature sleeving

PYROJACKET
AEROSTYLE PYROJACKET

Material: Silicone-coated glass fibre
in rust colour
Working temp.: from -54°C to +260°C
Up to +1093°C for 15 ÷ 20 minutes
Up to +1650°C for 15 ÷ 30 seconds

Thermal sleeving for hoses, cables and ropes. Resistant to flame, abrasion, oils and most industrial chemicals. Used in steelworks, metal and glass foundries - molten metal and glass splashes do not stick to the sleeve. Also used to protect steam and hot-oil installations - protects against burns and energy losses. Its very good moisture resistance means it can also be used outdoors. Available in other colours on request.

A special version of the sleeving (AEROSTYLE PYROJACKET) is intended mainly for aviation (made to SAE Aerospace Standard 1072E), the railway industry (compliant with DIN EN 45545-2:2013-08) and marine use. It is additionally certified in diameters 13 mm -127 mm by DNV-GL up to +800°C for 30 minutes (ISO 15540) and by MSHA (for use in mines).
Both sleeving types are available on request in the VCO version with flame-retardant hook-and-loop fastening (velcro) in diameters from 22 mm to 140 mm, in lengths up to 30 metres. The hook-and-loop fastening allows easy installation without disconnecting lines, cables or pipes.
